

Personal and Business Finance Management App

Version 1.1 - Approved for development

A statement-led application for personal and office money visibility, controlled Accountant input, commitments, investments and owner-level insights.	
Version	1.1
Status	Approved build baseline
Primary roles	Owner and Accountant user(s)
Source	Approved PRD v1.1 and client changes
Date	14 July 2026

1. Architecture Principles

- Statement-led: Bank, credit card and UPI imports are the preferred source of truth.
- Owner-first visibility: The Owner receives consolidated personal and office insights.
- Least manual effort: Known transactions are categorised automatically and only exceptions require review.
- Privacy by default: Accountant users see only explicitly permitted tabs and accounts.
- One logical movement, one record: Commitments and manual placeholders must match imported transactions instead of creating duplicates.
- Modular personal finance: Insurance, Utilities, Subscriptions and Investments are dedicated tabs.
- Future-ready access: Phase 1 exposes Owner and Accountant roles while supporting multiple user accounts and future role types.

2. Roles and Access Model

Role	Default navigation	Data scope	Administration
Owner	All modules	All personal and office data	Users, permissions, masters, password resets, audit and exports
Accountant user	Accounts, Import Statements and Add Entry by default	Only selected accounts and permitted records	Own profile, statement work, exceptional entries and deletion requests

2.1 Identity Isolation

- Profile, sidebar identity, header identity and audit identity must be loaded from the authenticated user ID.
- The Accountant Profile page must never display the Owner name, email, phone or avatar.
- Permissions must be validated in both frontend navigation and backend/API access.
- The Owner may reset an Accountant password but may never view an existing password.

3. Owner Information Architecture

Navigation group	Tab	Purpose
Overview	Dashboard	Balances, income, expenses, net cash flow, alerts and drill-downs
Money Records	Transactions	Income, expenses, transfers, pending, unknown, duplicate and imported records
Money Sources	Accounts	Bank, cards, UPI/wallet, cash, loans and reconciliation
Data Intake	Import Statements	Upload, map, validate, categorise, match and confirm
Data Intake	Add Entry	Cash, pending, expected income, transfer, refund and exceptional records
Personal Finance	Insurance	Policies, renewals, premiums and documents
Personal Finance	Utilities	Electricity, gas, water, internet, mobile and locations
Personal Finance	Subscriptions	Personal and office recurring services
Wealth	Investments	Overview, Mutual Funds, Shares and other investment types
Planning	Plans and Projections	Income, home, office and investment plans with actual variance
Attention	Financial Calendar	Month, agenda, due, overdue and

Navigation group	Tab	Purpose
		expected income views
Control	Approvals	Payment, deletion, correction and reconciliation requests
Analysis	Reports and Insights	Spend, income, accounts, commitments, investments and Excel-equivalent reports
Administration	Users & Access	User directory, invitations, permissions, selected accounts and password resets
Administration	Settings	Categories, subcategories, rules, masters, imports, audit and backup

4. Accountant Information Architecture

The initial Accountant navigation is intentionally narrow. Additional tabs are shown only when the Owner enables them for that specific user.

Tab	Default actions	Account scope	Hidden by default
Accounts	View permitted account details and reconciliation work	Selected by Owner	Personal accounts not selected by Owner
Import Statements	Upload, map, review unknown items and submit	Selected accounts only	Owner-only accounts and protected categories
Add Entry	Single/bulk entry, pending payment, expected income and deletion request	Selected accounts only	Investments and owner-only modules
Profile	Edit own profile, change password and request email reset	Own user record only	Owner profile and other user profiles

5. Users & Access Architecture

5.1 User Directory

- List all users with name, email, role, status and last login.
- Create or invite multiple Accountant users.
- Select a user to manage that user without changing another profile.
- Activate, suspend, deactivate or reactivate a user.
- Send a password reset link or set a temporary password.

5.2 Per-User Permission Layers

Layer	Examples	Enforcement
Tab visibility	Accounts, Imports, Add Entry, Reports	Hidden tabs are also blocked through URLs and APIs
Actions	View, Add, Edit, Import, Export, Request Delete	Checked for each authorised request
Account scope	ICICI Office, Office Card, Cash	Queries and exports include only permitted accounts
Data scope	Office only, selected modules	Protected personal and investment data excluded

6. Financial Calendar Architecture

The calendar is a primary attention screen, not only a date grid. It combines a readable monthly view with an agenda and financial summaries.

Component	Required content	Interaction
Summary cards	Due this week, next 30 days, overdue and expected income	Open filtered commitment list
Month grid	Insurance, utilities, subscriptions, card dues, EMIs, income and maturities	Click event to open linked record
Agenda	Chronological upcoming items with amount and source	Open, edit or resolve commitment
Filters	All, insurance, utilities, subscriptions, income and other types	Update grid and agenda together
Navigation	Previous month, next month, today, month/agenda toggle	Maintain current filters

7. Module Sub-navigation

Insurance

All Policies • Upcoming Renewals • Paid Premiums • Expired Policies • Documents • Insurance Types

Utilities

All Connections • Upcoming Bills • Paid Bills • Overdue Bills • Locations • Utility Types

Subscriptions

All Subscriptions • Personal • Office • Upcoming Renewals • Auto-renewals • Cancelled • Categories

Investments

Overview • Mutual Funds • Shares • Fixed Deposits / RD • PPF / NPS • Gold / Bonds • Real Estate • Business Capital • Other

Reports and Insights

Financial Overview • Spend Intelligence • Income Analysis • Payees / Payers • Accounts • Commitments • Investments • Reconciliation • Saved Views

8. Core Data Flows

Flow	Sequence
Statement Import	Select permitted account -> Upload -> Map/validate -> Duplicate and transfer detection -> Auto-categorise -> Match commitments/manual entries -> Review exceptions -> Confirm -> Reconcile -> Update dashboards
Unknown Categorisation	Unknown queue -> Review narration/amount/account -> Select usage, category and subcategory -> Optionally save future rule -> Confirm
Commitment Payment	Commitment due -> In-app reminder -> Imported payment detected -> Match suggestion -> Confirm -> Actual transaction recorded once -> Commitment marked paid
Manual Placeholder	Pending/manual record -> Later statement import -> Match suggestion -> Link records -> Keep one logical transaction in

Flow	Sequence
	reports
Deletion Request	Accountant requests deletion with reason -> Owner reviews -> Approve/reject -> Soft delete and audit history
User Onboarding	Owner creates user -> Invitation email -> User sets password -> Owner configures tabs/accounts/actions -> User signs in to restricted workspace

9. Screen Inventory for Development

Area	Screens
Authentication	Login, Forgot Password, Reset Password, Forced Password Change
Owner overview	Dashboard, alerts and drill-down panels
Transactions	List, filters, details, split, match and deletion history
Accounts	List, account detail, statement history and reconciliation
Imports	Upload, mapping, validation, categorisation, matching and confirmation
Personal modules	Insurance, Utilities, Subscriptions and record details
Investments	Overview, Mutual Funds, Shares and asset details
Planning	Monthly plans and actual-vs-projected analysis
Attention	Financial Calendar and Approvals
Analysis	Reports, saved views and exports
Administration	Users & Access, Settings, Categories, Rules and Audit
Profiles	Owner profile and role-specific Accountant profile

10. Approved UI Design Direction

Dominant colour: #181E32. Green must not be used as the dominant theme. Teal is reserved for positive states, selected financial accents and success feedback.

Colour	HEX	Use
	#181E32	Primary buttons, key headings, primary navigation language
	#171D31	Sidebar and high-contrast backgrounds
Warm Beige	#CDC1B4	Neutral accents, secondary visual structure
Earth Neutral	#6C6456	Insurance and muted category accents
Neutral Grey	#767678	Secondary text and inactive states
Teal	#56A688	Success, positive status and selected finance accents
Blue	#3A71AA	Information, links, active toggles and chart accents

10.1 UI Behaviour Rules

- Desktop-first responsive application with tablet and mobile support.
- Sidebar uses deep navy and active items use a controlled blue/navy state.
- Primary actions use dominant navy; blue supports secondary interactive states.
- Teal is used for success, paid, reconciled and positive values.
- Tables, cards and forms use warm neutral backgrounds and clear spacing.
- Accountant mode must never expose Owner-only names, balances, accounts or modules.

11. Existing Excel Coverage

Workbook sheet	Application destination
Cash Flow Summary	Dashboard and Financial Overview
Cash Flow Actual Vs Projection	Plans and Projections
Income	Income Plan and Categories
Actual Home Expenses	Home Expense Plan and Categories
Plan Office Expenses	Office Expense Plan and Categories
Investments	Investments and Investment Plan
Daily Expenses	Transactions - Expenses
List of Heads	Categories, Subcategories, Payment Modes and Income Sources
Monthly Cash Flow Summary	Monthly Cash Flow Report
Daily Cash Flow	Daily Cash Flow Report
Daily Income Tracker	Transactions - Income
Monthly Expenses Summary	Monthly Expense Report
Monthly Income Summary	Monthly Income Report

12. Development Baseline

- Build against PRD v1.1, IA v1.1 and the revised high-fidelity UI prototype v1.1.
- Use a stable user_id for profile, permissions, audit and record ownership.
- Use a permission service or middleware so access is not enforced only by hidden menus.
- Keep commitments separate from actual money transactions and link them during matching.
- Make imports idempotent and store import batch, source row and duplicate fingerprints.
- Preserve category and subcategory masters as Owner-managed configuration.
- Record later client changes in a numbered change log before implementation.

Approved next step: Begin development planning and database design using this IA as the navigation, access and interaction baseline.
