

PRODUCT REQUIREMENTS DOCUMENT

Personal and Business Finance Management App

A statement-led financial visibility, tracking and reminder system for the Owner and Accountant

Document	Details
Client reference	Nirmal Kumar Cash Flow Workbook
Version	1.1 - Approved baseline for development
Prepared date	14 July 2026
Primary users	Owner and Accountant
Source workbook	NirmalKumar_CashFlow_Jun26_Mar27.xlsx
Coverage	All 13 visible workbook sheets and agreed enhancements

Core product principle: Use imported bank, credit card and UPI data as the preferred source of truth. Minimise manual entry, automate known categorisation, and route only unknown or ambiguous items for human review.

CONFIDENTIAL

For client review, product design and development planning only.

Document Control

Version	Date	Status	Summary
0.1	14 July 2026	Working draft	Initial PRD based on Excel review and discovery discussions
1.0	14 July 2026	Draft for approval	Includes approved IA, roles, automation, tabs, reports and authentication requirements
1.1	14 July 2026	Approved for build	Corrects role-specific profiles, adds multi-user management, improves calendar requirements and applies the approved colour palette.

- Appendix B. Existing Daily Entry Fields

1. Executive Summary

The application will replace a multi-sheet Excel cash-flow workbook with a private, responsive web application. It will combine personal and office money in one system while preserving privacy, access control, monthly planning, actual-versus-projected reporting and daily cash-flow visibility.

The solution is intentionally not a full accounting, ERP, GST or payroll platform. Its purpose is to help a business owner understand money movement across multiple accounts, reduce manual entry, detect duplication, categorise spending, monitor renewals and commitments, and obtain reliable owner-level insights.

Primary outcome: The Owner should be able to answer where money came from, where it went, through which account, whether it was personal or office related, what is pending, what is renewing, and what requires attention within a few clicks.

1.1 Product Principles

- Statement-led: Imported financial statements are the preferred source of truth.
- Low manual effort: Manual entry is reserved for cash, future commitments, expected income and exceptional cases.
- One logical transaction: Manual records, reminders and imports must be matched to prevent duplicate reporting.
- Owner privacy: Personal investments and sensitive financial tabs remain hidden from the Accountant unless explicitly permitted.
- Actionable visuals: Reports must provide drill-down access to supporting transactions.
- Customisable structure: The Owner can maintain categories, subcategories, accounts, insurance types, utility locations and other masters.
- Auditable changes: Important edits, approvals, deletion requests and imports must retain history.

2. Background and Existing Workbook

The source workbook contains 13 visible worksheets. It combines planning sheets, daily entry sheets, master lists and summary reports. The app will preserve the business meaning of these sheets without reproducing the spreadsheet layout or formula dependency.

Workbook layer	Existing sheets	Application treatment
Planning	Income, Actual Home Expenses, Plan Office Expenses, Investments	Owner planning and projection modules
Transaction entry	Daily Expenses, Daily Income Tracker	Transactions and statement imports
Master data	List of Heads	Categories, subcategories, payment modes and income sources
Reports	Cash Flow Summary, Actual Vs Projection, Daily Cash Flow, Monthly summaries	Dashboard, reports and insights

Known workbook condition: Some workbook formulas contain broken or external references. The application must rebuild calculations from validated database records and agreed business rules rather than copying spreadsheet formulas.

2.1 Problems to Solve

- Multiple sheets make entry and review difficult on mobile devices.
- Users can accidentally alter formulas or use inconsistent category names.
- Manual entries and later statement imports can create duplicate transactions.
- The Owner lacks one consolidated view across personal and office accounts.
- Renewals, commitments and investments are not managed as structured records.
- Excel permissions do not provide reliable tab-level and data-level privacy.
- Reconciliation and categorisation require too much repeated manual work.

3. Product Vision, Goals and Success Measures

3.1 Product Vision

Create a personal financial control centre for a business owner that consolidates personal and office money, simplifies Accountant input, uses imports to maintain accuracy, and presents clear financial insights without the complexity of enterprise accounting software.

3.2 Goals

Goal ID	Goal
G-01	Reduce repeated manual transaction entry through statement imports and reusable categorisation rules.
G-02	Provide an instant Owner dashboard for income, expenses, balances, pending items and commitments.
G-03	Separate personal and office views while still allowing a consolidated owner-level perspective.
G-04	Prevent duplicate expenses when reminders, manual entries and imported transactions refer to the same payment.
G-05	Protect investments and personal data through strict role and tab permissions.
G-06	Retain monthly planning and actual-versus-projected analysis from the Excel workbook.
G-07	Provide reliable exports, audit history and reconciliation status.

3.3 Success Measures

Measure	Target for initial release
Import coverage	Common bank, card and UPI statements can be imported using mapping or configured templates.
Automated categorisation	Known narrations and previously confirmed patterns are classified without repeated user action.
Unknown review	Only unknown, low-confidence or conflicting transactions require Accountant review.

Measure	Target for initial release
Duplicate prevention	A logical transaction appears once in reports even when a reminder or manual record existed first.
Dashboard usability	Owner can reach supporting transactions from every major KPI or chart.
Access privacy	Accountant cannot see hidden tabs, hidden records or protected API data.
Reconciliation visibility	Each account displays import coverage, closing balance and unresolved differences.

4. Scope and Release Boundaries

4.1 Phase 1 In Scope

- Owner and Accountant authentication and profiles
- Email-based forgot-password recovery
- Owner-controlled Accountant password reset and access management
- Owner dashboard and financial insights
- Accounts, credit cards, UPI, wallets and cash tracking
- Bank, card, UPI and formatted Excel/CSV import
- Automated categorisation rules and unknown review queue
- Single and bulk manual entry for exceptions
- Income, expense, transfer, pending and reconciliation workflows
- Categories and subcategories maintained by the Owner
- Insurance, Utilities, Subscriptions and Investments tabs
- Mutual Funds and Shares subtabs under Investments
- Plans and Projections including actual-versus-projected
- In-app financial calendar and reminders
- Owner approvals and Accountant deletion requests
- Reports, exports, audit history and basic backup requirements
- Existing Excel data migration and mapping

4.2 Explicitly Out of Scope for Phase 1

- GST filing or statutory return preparation
- Double-entry bookkeeping, general ledger, balance sheet or trial balance
- Inventory, purchase order or vendor portal management
- Payroll computation and salary compliance
- Customer invoicing and CRM
- Direct bank-login aggregation or open-banking integration
- Live stock or mutual-fund market feeds
- WhatsApp, SMS or push reminders
- Automated tax advice or investment recommendations
- Native Android or iOS applications

5. Users, Roles and Permissions

5.1 Role Summary

Role	Default access	Key responsibilities
Owner	All modules and all data	Manage financial structure, review insights, approve requests, control Accountant access and maintain personal modules.
Accountant user(s)	Accounts, Import Statements and Add Entry only, unless additional access is enabled	Import statements, review unknown entries, add exceptional transactions, track pending items and request deletion within permitted account scope.

5.2 Permission Model

- Tab-level permission: A tab is either visible or completely hidden.
- Action-level permission: View, Add, Edit, Import, Export, Categorise, Upload and Request Delete can be controlled.
- Data-level permission: The Owner can allow only selected accounts or selected personal/office records.
- Server-side enforcement: Hidden UI elements alone are not sufficient. API and database access must enforce the same permission.
- Phase 1 restriction: Category management and all sensitive personal tabs remain Owner-only.
- Future flexibility: The Users & Access page should permit additional Accountant access without code changes.

5.3 Initial Access Matrix

Module	Owner	Accountant default
Profile and password	Full own profile; can reset selected Accountant users	Own profile and password only. Profile data must come from the signed-in user record.
Dashboard	Full	Hidden
Accounts	Full	Selected accounts only
Import Statements	Full	Allowed
Add Entry	Full	Allowed
Transactions	Full	Limited to permitted account context and own work
Insurance	Full	Hidden
Utilities	Full	Hidden
Subscriptions	Full	Hidden
Investments, Mutual Funds, Shares	Full	Hidden
Plans and Projections	Full	Hidden

Module	Owner	Accountant default
Financial Calendar	Full	Hidden unless enabled later
Approvals	Full	Request status only
Reports and Insights	Full	Hidden
Categories and Rules	Full	Hidden
Users & Access and Audit	Full user directory, invitations, access, status and audit	Hidden

6. Information Architecture

6.1 Owner Navigation

1. Dashboard
2. Transactions
3. Accounts
4. Import Statements
5. Add Entry
6. Insurance
7. Utilities
8. Subscriptions
9. Investments
10. Plans and Projections
11. Financial Calendar
12. Approvals
13. Reports and Insights
14. Users & Access
15. Settings

6.2 Accountant Navigation

1. Accounts
2. Import Statements
3. Add Entry

Only tabs enabled by the Owner must appear in the Accountant navigation. Hidden modules must not be discoverable through direct URLs or API calls.

6.3 Investments Sub-navigation

- Overview
- Mutual Funds
- Shares
- Fixed Deposits and Recurring Deposits
- PPF and NPS
- Gold and Bonds
- Real Estate

- Business Capital and Assets
- Other Investments

6.4 Users & Access Sub-navigation

- User Directory
- Create / Invite User
- User Profile and Status
- Tab and Action Permissions
- Permitted Account Selection
- Password Reset and Session Revocation
- User Activity and Permission History

Phase 1 supports Owner and Accountant roles. The data model and access page must support multiple Accountant user accounts and allow additional role types to be introduced later without redesigning financial records.

7. Functional Requirements

7.1 Authentication, Profile and Password Management

ID	Requirement	Priority	Acceptance criteria
AUTH-01	The system shall provide separate Owner and Accountant login accounts using email and password.	Must	A valid active account can log in and is redirected only to permitted modules.
AUTH-02	The Owner and each Accountant user shall have a separate Profile page containing only that authenticated user's name, email, optional phone, role and account status.	Must	Switching or signing in as an Accountant displays the Accountant profile and never displays Owner profile details.
AUTH-03	Each user shall be able to change their own password after entering the current password.	Must	Old password stops working and the change is recorded in security history.
AUTH-04	The login screen shall include Forgot Password. The system shall email a one-time reset link to the registered email address.	Must	Reset link is single-use, expires after a configurable period and permits a new password.
AUTH-05	The response to Forgot Password shall not disclose whether an email address exists.	Must	The UI always shows a neutral confirmation message.
AUTH-06	The Owner shall be able to initiate a password reset for any selected Accountant user from Users & Access.	Must	The selected user receives a reset link or temporary password without exposing any existing password.

ID	Requirement	Priority	Acceptance criteria
AUTH-07	If the Owner sets a temporary Accountant password, the Accountant shall be forced to change it on the next login.	Must	No normal application access is granted until a new password is saved.
AUTH-08	The Owner shall be able to activate, deactivate or suspend each Accountant user account independently.	Must	A deactivated user cannot log in and that user's existing sessions are revoked.
AUTH-09	The system shall apply rate limiting or temporary logout after repeated failed login attempts.	Must	Repeated failures trigger a temporary security restriction and audit entry.
AUTH-10	All password reset and password change events shall be audited.	Must	Audit history records actor, target user, event type and timestamp without storing passwords.
AUTH-11	Profile information, menu identity and audit identity shall be loaded from the authenticated user ID, not from static Owner defaults.	Must	Owner and Accountant views show the correct name, role, email and initials throughout the interface.

Security interpretation: The Owner can reset or replace a selected Accountant password, but cannot view the existing password. Passwords must be stored only as secure hashes.

7.2 Owner Dashboard

ID	Requirement	Priority	Acceptance criteria
DASH-01	Display total calculated balances across active accounts, with the option to exclude selected accounts.	Must	Total equals the sum of latest reconciled or calculated account balances.
DASH-02	Display income, expenses and net cash flow for Today, This Week, This Month, Last Month and Custom Period.	Must	Changing the period updates all linked cards and charts.
DASH-03	Display personal versus office spending.	Must	Totals reconcile to confirmed expense transactions for the selected period.
DASH-04	Display pending income, pending payments, upcoming commitments and approval counts.	Must	Each card links to the filtered source list.
DASH-05	Display category and	Must	Owner can click a category to

ID	Requirement	Priority	Acceptance criteria
	subcategory spend analysis.		view underlying transactions.
DASH-06	Display daily and monthly trends with prior-period comparison.	Must	Trend values use the same selected filters and source data.
DASH-07	Display top payees, top payers, highest single transaction and most-used account.	Must	Each insight supports transaction drill-down.
DASH-08	Display attention items including unknown transactions, duplicate suspects, overdue commitments and unreconciled accounts.	Must	Counts update when items are resolved.
DASH-09	Allow personal/office, account, date and category filters.	Must	Filters persist during drill-down until reset.

7.3 Transactions

ID	Requirement	Priority	Acceptance criteria
TXN-01	Maintain a unified transaction register for income, expense, transfer, refund, reversal, investment, loan, advance and reimbursement records.	Must	All transaction types can be filtered and traced to their source.
TXN-02	Store personal or office classification and support Shared transactions with split allocations.	Must	Split amounts total the original transaction amount.
TXN-03	Support category and subcategory on each expense or income allocation.	Must	Reports aggregate at both levels.
TXN-04	Store payee or payer, account, reference, narration, reason, attachment, source and entered-by details.	Must	Transaction detail displays all available metadata.
TXN-05	Distinguish imported, manual, provisional, matched, reversed and deleted statuses.	Must	Status is visible and used in reporting rules.
TXN-06	Allow the Owner to edit confirmed transactions with audit history.	Must	Before and after values are retained in audit logs.
TXN-07	Allow the Accountant to edit only permitted records and request deletion rather than permanently delete.	Must	Delete action creates an Owner approval request.
TXN-08	Support transaction splitting	Must	One imported line can have

ID	Requirement	Priority	Acceptance criteria
	into multiple categories, subcategories or personal/office portions.		multiple allocations without changing the bank amount.
TXN-09	Support links between transaction, commitment, manual entry, imported line and approval.	Must	Users can navigate between linked records.

7.4 Accounts and Payment Channels

ID	Requirement	Priority	Acceptance criteria
ACC-01	Support Bank Account, Credit Card, UPI/Wallet, Cash and Loan Account types.	Must	Owner can create an account of each type.
ACC-02	Store account name, provider, account holder, last four digits, personal/office type, currency, opening balance and active status.	Must	Account detail displays all configured fields.
ACC-03	Calculate account balance from confirmed transactions and imported statement balances.	Must	Balance calculation follows reconciliation rules and shows the calculation date.
ACC-04	Display last imported date, statement period and reconciliation status.	Must	Account list shows import freshness and unresolved status.
ACC-05	Allow the Owner to select which accounts the Accountant can view or use.	Must	Unselected accounts do not appear in Accountant screens or API responses.
ACC-06	Treat internal account transfers as transfers, not income or expenses.	Must	Consolidated income and expense totals exclude internal transfers.
ACC-07	Treat credit card purchases as expenses and credit card repayments as transfers.	Must	A purchase and bill repayment do not double-count spend.
ACC-08	Allow accounts with linked transactions to be archived but not hard-deleted.	Must	Historical transactions remain available.

7.5 Statement Import

ID	Requirement	Priority	Acceptance criteria
IMP-01	Allow upload of XLSX and CSV statements for permitted accounts.	Must	Valid files proceed to preview and invalid files return clear errors.

ID	Requirement	Priority	Acceptance criteria
IMP-02	Allow configurable column mapping for date, narration, debit, credit, amount, reference and balance.	Must	A saved mapping can be reused for the same statement format.
IMP-03	Normalise different debit/credit formats into a common transaction structure.	Must	Preview shows the normalised value and direction.
IMP-04	Detect previously imported rows using account, reference, date, amount and statement fingerprint.	Must	Previously imported records are blocked or clearly flagged.
IMP-05	Detect possible duplicates even when exact references are unavailable.	Must	Potential duplicates enter a review queue with match reasons.
IMP-06	Identify possible internal transfers between owned accounts.	Must	Transfer suggestions show both sides when available.
IMP-07	Apply automated categorisation rules before human review.	Must	Known rows arrive pre-categorised with a confidence or rule source.
IMP-08	Attempt to match imported rows to commitments, pending entries and provisional manual transactions.	Must	Suggested matches are presented before creating a separate transaction.
IMP-09	Route unknown, conflicting or low-confidence entries to a review queue.	Must	Only reviewed or confidently categorised records can be confirmed.
IMP-10	Provide import summary including total rows, accepted, duplicates, transfers, matched, unknown and rejected.	Must	Summary totals reconcile to the uploaded file.
IMP-11	Maintain immutable source-file metadata and import history.	Must	Owner can trace every imported transaction to an import batch.

7.6 Automated Categorisation

ID	Requirement	Priority	Acceptance criteria
CAT-01	Apply categorisation using Owner-created exact rules as the first priority.	Must	Exact rule matches are applied consistently.
CAT-02	Use previously confirmed merchant and narration patterns as the second priority.	Must	Repeated known transactions require no repeated categorisation.
CAT-03	Support merchant keywords, account, amount range,	Must	Owner can configure and test a rule.

ID	Requirement	Priority	Acceptance criteria
	debit/credit direction and personal/office defaults in rules.		
CAT-04	Assign both Category and Subcategory.	Must	Confirmed transaction has valid active or historical category references.
CAT-05	Display the reason or rule that produced an automatic category.	Must	Transaction detail shows categorisation source.
CAT-06	Allow Accountant review of unknown transactions.	Must	Accountant can select category/subcategory within permitted workflow.
CAT-07	Ask whether a confirmed manual categorisation should become a future rule.	Should	User can save or decline a reusable rule.
CAT-08	Send conflicting rule results to review instead of silently choosing.	Must	Conflict status is visible and blocks final confirmation.

7.7 Add Entry and Bulk Entry

ID	Requirement	Priority	Acceptance criteria
ENTRY-01	Provide a simple form for Date, Amount, Type, Account, Personal/Office, Payee/Payer, Category, Subcategory, Reference, Reason, Status and Attachment.	Must	Required fields are validated and the entry is saved.
ENTRY-02	Support single entry for cash, future payment, expected income, transfer, refund, loan, advance and reimbursement.	Must	Each selected type shows relevant fields only.
ENTRY-03	Support bulk entry using an app-formatted Excel or on-screen grid.	Must	Rows are validated independently and errors can be corrected before submission.
ENTRY-04	Mark bank/card manual entries as Provisional or Pending Statement Match when appropriate.	Must	Provisional status is visible and used in matching.
ENTRY-05	Allow cash transactions to be final without statement matching.	Must	Cash account balance updates immediately after confirmation.
ENTRY-06	Allow attachments such as receipt, invoice, policy document or payment proof.	Must	Permitted formats upload to private storage and link to the record.

7.8 Categories and Subcategories

ID	Requirement	Priority	Acceptance criteria
MASTER-01	Provide initial categories and subcategories based on the Excel workbook.	Must	The configured masters cover all existing workbook heads.
MASTER-02	Allow the Owner to add, edit, reorder, merge, archive and delete unused categories.	Must	Owner can maintain categories without code changes.
MASTER-03	Allow the Owner to add, edit, move, archive and delete unused subcategories.	Must	Subcategory belongs to one valid parent category.
MASTER-04	Prevent hard deletion of categories used in historical records.	Must	Used category can only be archived or merged.
MASTER-05	Allow default personal/office classification and optional matching keywords.	Should	Defaults apply to new rules or manual entries.
MASTER-06	Keep category management hidden from the Accountant in Phase 1.	Must	No menu, direct URL or API access is available.

7.9 Insurance

ID	Requirement	Priority	Acceptance criteria
INS-01	Provide Insurance as a separate Owner tab.	Must	Insurance appears in Owner navigation and is hidden from Accountant by default.
INS-02	Support Health, Life, Term, Bike, Car, Property, Business, Personal Accident, ULIP/Endowment and custom types.	Must	Owner can create records for each type and add custom types.
INS-03	Store policy name, provider, policy number, insured person/asset, premium, frequency, renewal date, linked account, nominee, agent, documents, status and reminder.	Must	Insurance detail captures the specified fields.
INS-04	Display upcoming, due, overdue, paid, expired and inactive policies.	Must	Status changes reflect dates and linked payments.
INS-05	Match an imported premium payment to the policy commitment instead of creating a duplicate expense.	Must	One actual transaction is reported and the policy renewal is marked paid.
INS-06	If marked paid manually,	Must	Later import merges with the

ID	Requirement	Priority	Acceptance criteria
	create a provisional transaction awaiting import match unless paid by cash.		provisional record.
INS-07	Allow the Owner to add, edit, archive and delete unused insurance types and records.	Must	Historical paid policies remain retrievable.

7.10 Utilities

ID	Requirement	Priority	Acceptance criteria
UTIL-01	Provide Utilities as a separate Owner tab.	Must	Utilities appears in Owner navigation.
UTIL-02	Support Electricity, Gas/LPG, Water, Internet, Mobile, Cable/DTH, Maintenance and custom utility types.	Must	Owner can add standard and custom types.
UTIL-03	Support locations such as Home, Office, Additional Residence, Rental Property, Business Location and custom locations.	Must	Each connection links to one location.
UTIL-04	Store provider, consumer number, billing cycle, due date, expected amount, linked account, document and reminder.	Must	Utility detail displays all configured fields.
UTIL-05	Support Home, Office and Additional connections under Electricity and similar utility groups.	Must	Owner can maintain multiple connections of the same type.
UTIL-06	Match imported payments to due utility commitments and avoid duplicate expenses.	Must	One actual transaction updates the bill to Paid.
UTIL-07	Show upcoming, due, overdue, paid and unresolved bills.	Must	Bill status is filterable.

7.11 Subscriptions

ID	Requirement	Priority	Acceptance criteria
SUB-01	Provide Subscriptions as a separate Owner tab.	Must	Subscriptions appears in Owner navigation.
SUB-02	Allow any personal or office subscription such as Amazon, Spotify, Netflix, Workspace, software, hosting, domains,	Must	Owner can create custom subscriptions.

ID	Requirement	Priority	Acceptance criteria
	gym and clubs.		
SUB-03	Store name, provider, category, personal/office, amount, billing frequency, renewal date, auto-renew status, account/card, reference and reminder.	Must	Subscription detail captures specified fields.
SUB-04	Match imported recurring charges to subscription records.	Must	Known subscription transaction is linked automatically or suggested.
SUB-05	Show monthly and annual subscription commitment totals.	Must	Totals reconcile to active subscription records.
SUB-06	Allow active, paused, cancelled and expired status.	Must	Cancelled subscriptions do not create future commitments.

7.12 Investments

ID	Requirement	Priority	Acceptance criteria
INV-01	Provide Investments as a separate Owner-only main tab.	Must	Investment data is absent from Accountant menus and responses.
INV-02	Provide Overview, Mutual Funds, Shares and other agreed investment subtabs.	Must	All subtabs are accessible from Investments.
INV-03	Support manual current value updates in Phase 1.	Must	Owner can record valuation date and current value.
INV-04	Support documents, nominees, agents/advisors, brokers and linked accounts.	Must	Investment records retain relevant references.
INV-05	Link investment contributions detected in statements without treating principal transfers as normal consumption spend.	Must	Reports distinguish investment outflow from operating expense.
INV-06	Display amount invested, current recorded value, contribution trend, allocation and maturity.	Must	Investment summary reconciles to active records and linked transactions.

7.12.1 Mutual Funds

ID	Requirement	Priority	Acceptance criteria
MF-01	Support Debt, Equity, Hybrid, ELSS and custom categories.	Must	Owner can categorise each scheme.
MF-02	Support grouping by	Must	Filters and reports work for

ID	Requirement	Priority	Acceptance criteria
	AMC/company, scheme, agent/advisor, direct/regular and SIP/lump sum.		each grouping.
MF-03	Store folio number, SIP amount, frequency, invested amount, units if available, current value, valuation date, start date, goal/maturity and nominee.	Must	Mutual fund detail captures specified fields.

7.12.2 Shares

ID	Requirement	Priority	Acceptance criteria
SHARE-01	Support company-wise share records with optional sector, broker and demat account.	Must	Owner can group and filter by company and sector.
SHARE-02	Store company, symbol, purchase history, quantity, average cost, invested amount, current value and valuation date.	Must	Share record calculates or stores agreed totals.
SHARE-03	Live market prices are not required in Phase 1.	Must	No external market-feed dependency is included.

7.13 Plans and Projections

ID	Requirement	Priority	Acceptance criteria
PLAN-01	Allow Owner-only monthly planning for personal income, business income, home expenses, office expenses and investments.	Must	Projected amounts can be entered by financial year and month.
PLAN-02	Calculate Actual values from confirmed transactions.	Must	No repeated manual actual entry is required.
PLAN-03	Calculate variance amount and variance percentage.	Must	Variance follows Projected versus Actual rules.
PLAN-04	Show total income, total home expenses, total office expenses, total investments, total outflow and net cash flow.	Must	Results match underlying confirmed transactions and plans.
PLAN-05	Support opening balance, closing balance and cumulative savings projection.	Must	Monthly closing can carry forward to the next period.
PLAN-06	Allow drill-down from Actual amounts to transactions.	Must	Clicking Actual opens the filtered transaction list.

7.14 Financial Calendar and In-App Reminders

ID	Requirement	Priority	Acceptance criteria
REM-01	Display insurance renewals, utility bills, subscriptions, credit card dues, EMIs, SIPs, rent, expected income and investment maturities.	Must	All active commitments appear on the correct dates.
REM-02	Provide Today, This Week, This Month, Upcoming 30 Days, Overdue, Month Calendar and Agenda views.	Must	Views filter the same commitment data and remain readable on desktop and mobile.
REM-03	Provide in-app reminder badges and dashboard alerts only in Phase 1.	Must	No WhatsApp, SMS or push integration is required.
REM-04	Allow configurable reminder lead days for each record.	Must	Owner can set or change lead time.
REM-05	Mark reminders resolved when a commitment is matched or completed.	Must	Resolved items leave the attention queue but remain in history.
REM-06	The Financial Calendar shall provide a clear monthly grid with event type indicators, current-day highlighting, previous/next month controls and filters.	Must	Dates, event labels and status colours are visually distinguishable without opening each record.
REM-07	The calendar page shall include an upcoming agenda and summary cards for due this week, next 30 days, overdue items and expected income.	Must	The Owner can understand upcoming commitments at a glance and open the linked record.

7.15 Approvals

ID	Requirement	Priority	Acceptance criteria
APR-01	Provide Owner approval for Accountant deletion requests.	Must	Accountant cannot permanently delete without Owner decision.
APR-02	Support approval statuses Pending, Approved, Rejected, Correction Requested and Completed.	Must	Status history and comments are visible.
APR-03	Allow Owner approval of payment requests or corrections where configured.	Must	Approved action updates the linked record.

ID	Requirement	Priority	Acceptance criteria
APR-04	Retain deleted or reversed records in audit history.	Must	Historical details remain available to Owner.
APR-05	Notify the Owner in-app of new approval requests.	Must	Approval count updates without requiring report export.

7.16 Reports, Exports and Saved Views

ID	Requirement	Priority	Acceptance criteria
RPT-01	Provide standard daily cash flow, monthly cash flow, monthly income, monthly expenses and actual-versus-projected reports.	Must	Reports cover all equivalent Excel summary functions.
RPT-02	Provide spend, payee, payer, account, commitment, investment and reconciliation analysis.	Must	Reports support date and relevant dimension filters.
RPT-03	Allow drill-down from totals to transactions.	Must	Underlying records match the displayed total.
RPT-04	Allow export of filtered transaction data to XLSX or CSV and printable summary to PDF if included in implementation.	Must	Export respects filters and Owner permissions.
RPT-05	Allow Owner to save frequently used report filters.	Should	Saved view can be reopened and renamed.
RPT-06	Ensure Accountant exports are limited to permitted data.	Must	Protected accounts and modules are excluded.

7.17 Users & Access and Administration

ID	Requirement	Priority	Acceptance criteria
ADMIN-01	Provide an Owner-only Users & Access page with a user directory.	Must	Accountant users cannot access this page.
ADMIN-02	Allow the Owner to create or invite multiple Accountant users with name, email, role and initial status.	Must	Each new user receives an activation or password setup email and appears in the user directory.
ADMIN-03	Allow the Owner to configure visible tabs,	Must	Permissions are saved per user and take effect on the

ID	Requirement	Priority	Acceptance criteria
	actions and selected accounts separately for each user.		next authorised request and session refresh.
ADMIN-04	Allow the Owner to activate, suspend, deactivate or reactivate individual Accountant users and revoke their sessions.	Must	Deactivated account cannot continue using an old session.
ADMIN-05	Allow the Owner to reset the password of a selected Accountant user securely.	Must	Reset never reveals the current password.
ADMIN-06	Record permission changes in audit history.	Must	Audit shows who changed what and when.
ADMIN-07	Display all users in a directory with name, email, role, status, last login and permitted account summary.	Must	Owner can select a user and manage that user without editing another user's profile.
ADMIN-08	The user architecture shall support additional role types in a future release while Phase 1 exposes only Owner and Accountant roles.	Should	New role types can be added through configuration and permission mapping without changing transaction ownership fields.

7.18 Audit History and Data Recovery

ID	Requirement	Priority	Acceptance criteria
AUDIT-01	Record creation, edit, categorisation, match, split, import, approval, deletion, password and permission events.	Must	Each event includes actor, timestamp, action and record reference.
AUDIT-02	Retain before and after values for material financial edits.	Must	Owner can inspect changed fields.
AUDIT-03	Use soft deletion for financial records.	Must	Deleted records can be traced and excluded from normal reports.
AUDIT-04	Allow Owner to restore eligible soft-deleted records.	Should	Restoration creates a new audit event.
AUDIT-05	Provide daily automated database backup and documented restore process.	Must	A test restore can be performed in the deployment environment.

8. Detailed Workflows

8.1 Login and Forgot Password

1. User enters email and password.
2. System validates active account and password.
3. System loads only authorised role, tabs, accounts and actions.
4. If Forgot Password is selected, system shows a neutral confirmation message.
5. System emails a time-limited one-time reset link to the registered address.
6. User sets a new password and all previous reset tokens are invalidated.
7. System records the security event and optionally revokes existing sessions.

8.2 Owner Resets Accountant Password

1. Owner opens User Access and selects the Accountant.
2. Owner chooses Send Reset Link or Set Temporary Password.
3. System never displays the existing password.
4. If a reset link is selected, the Accountant receives an email.
5. If a temporary password is set, the system marks Force Password Change.
6. Accountant must create a new password before accessing financial modules.
7. Security event is stored in the audit log.

8.3 Statement Import and Confirmation

1. Accountant selects a permitted account and uploads the statement.
2. System validates file, date range and column structure.
3. System normalises rows and detects exact previously imported records.
4. System checks possible duplicates and transfers.
5. System applies categorisation rules.
6. System attempts commitment and provisional-entry matching.
7. Only unknown or conflicting rows enter Accountant review.
8. Accountant resolves allowed items and submits the batch.
9. System confirms transactions, updates calculated balances and generates an import summary.
10. Owner can inspect import history and reconciliation status.

8.4 Commitment and Actual Payment Matching

Scenario	Required behaviour
Import arrives first	System detects likely Insurance, Utility or Subscription commitment, links it, creates one actual transaction and marks commitment Paid.
Commitment is marked paid manually first	System creates a provisional transaction with date, amount, account and reference. Later import is matched and merged into the same logical transaction.
Cash payment	Manual cash transaction is final and linked to the commitment. No statement match is expected.

Scenario	Required behaviour
No confident match	Commitment and imported transaction remain separate pending user review. Neither is auto-merged.
Incorrect match	Owner can unlink and reclassify with audit history.

8.5 Unknown Transaction Categorisation

1. Unknown imported row appears in Needs Categorisation.
2. Accountant reviews narration, amount, account and date.
3. Accountant selects personal/office, category and subcategory.
4. System optionally suggests saving a future rule.
5. Confirmed transaction enters reports.
6. Owner can later correct classification with audit history.

8.6 Deletion Request

1. Accountant selects Request Delete and enters a reason.
2. Record remains visible with Delete Requested status.
3. Owner reviews supporting record and reason.
4. Owner approves, rejects or requests correction.
5. Approved deletion is soft deletion and is excluded from normal reports.
6. Audit history retains the original record and decision.

8.7 Account Reconciliation

1. System stores statement opening/closing balance where provided.
2. System calculates balance using confirmed transactions.
3. System compares statement closing balance and calculated balance.
4. Unresolved duplicates, missing rows and provisional records are listed.
5. Accountant resolves permitted items.
6. Owner or authorised workflow marks account period Reconciled.
7. A closed period can be reopened only with Owner permission and audit entry.

9. Business Rules

Rule ID	Rule
BR-01	Imported financial transactions are the preferred source of truth for bank, card, UPI and wallet accounts.
BR-02	A commitment does not become an actual expense until linked to an actual or provisional payment transaction.
BR-03	One logical money movement must appear once in reports.
BR-04	Internal transfers are excluded from consolidated income and expense totals.
BR-05	Credit card purchases are expenses. Credit card repayments are transfers.

Rule ID	Rule
BR-06	Investment contributions are tracked as investment outflows and reported separately from consumption expenses.
BR-07	Manual bank/card entries are provisional until matched or explicitly confirmed by the Owner.
BR-08	Cash entries can be final because no bank import is expected.
BR-09	Exact categorisation rules override learned history and generic merchant mappings.
BR-10	Unknown or conflicting transactions require human review.
BR-11	Accountant deletion requires Owner approval and results in soft deletion.
BR-12	Investment data is Owner-only by default and not visible to Accountant.
BR-13	Categories or subcategories used historically cannot be hard-deleted.
BR-14	All dashboard and report actuals are generated from confirmed, non-deleted logical transactions.
BR-15	Projected values are entered manually by the Owner; actual values are calculated.
BR-16	Accountant access is denied by default unless explicitly permitted.
BR-17	The Owner may reset but may never view an Accountant password.
BR-18	Email is used for password recovery in Phase 1. Financial reminders remain in-app only.
BR-19	Profile, navigation identity and audit identity must always represent the authenticated user.
BR-20	The system may contain multiple Accountant users. Permissions and permitted accounts are assigned per user.

10. Data Field Requirements

The following tables define the minimum fields. Final UI labels may be refined during wireframing, but the underlying data meaning must be retained.

10.1 User and Profile Fields

Field	Required	Notes
Full name	Yes	Displayed in profile and audit history

Field	Required	Notes
Email	Yes	Unique login and password reset destination
Phone	No	Reference only in Phase 1
Role	Yes	Owner or Accountant
Account status	Yes	Invited, Active, Suspended or Deactivated
Force password change	Yes	Used after Owner-issued temporary password
Last login	System	Timestamp
Created by / created at	System	Audit fields
User ID	System	Stable identity used for profile, permission and audit isolation
Last password reset / invited at	System	Security and onboarding history

10.2 Transaction Fields

Field	Required	Notes
Transaction date	Yes	Actual money movement date
Amount	Yes	Positive amount with direction/type stored separately
Transaction type	Yes	Income, Expense, Transfer, Refund, Reversal, Investment, Loan, Advance, Reimbursement
Personal/Office/Shared	Yes	Shared requires split allocations
Account	Yes	Source or destination account
Counterparty	Conditional	Payee or payer
Category	Conditional	Required for income/expense allocations
Subcategory	Conditional	Based on category configuration
Reference	No	UTR, cheque, invoice, bank reference
Narration	No	Imported description
Reason / notes	No	Human explanation
Source	Yes	Imported, Manual, Provisional, System
Status	Yes	Pending, Confirmed, Matched, Reversed, Deleted, etc.
Attachment	No	Private file reference
Import batch and source row	System	For imported records

Field	Required	Notes
Linked commitment	No	Insurance, utility, subscription or other
Entered / confirmed / edited by	System	Audit identity

10.3 Account Fields

Field	Required	Notes
Account name	Yes	Friendly label
Account type	Yes	Bank, Credit Card, UPI/Wallet, Cash, Loan
Provider / bank	Conditional	Bank or service provider
Personal or office	Yes	Ownership/use classification
Account holder	No	Name
Last four digits	No	Display reference only
Currency	Yes	INR initially
Opening balance	Yes	Migration/start value
Statement closing balance	No	From import or manual reconciliation
Calculated balance	System	From logical transactions
Last imported date	System	Import freshness
Reconciliation status	System	Not Started, In Progress, Difference, Reconciled, Closed
Accountant visibility	Yes	Default false unless permitted
Active / archived	Yes	Archive retains history

10.4 Commitment Common Fields

Field	Required	Notes
Commitment type	Yes	Insurance, Utility, Subscription, EMI, SIP, Expected Income, etc.
Name	Yes	Human-readable item
Personal or office	Yes	Classification
Expected amount	No	May vary for utilities
Frequency	Yes	One-time, monthly, quarterly, half-yearly, annual or custom
Due / renewal date	Yes	Next commitment date
Linked account/card	No	Expected payment channel

Field	Required	Notes
Provider / counterparty	No	Merchant or issuer
Reminder lead days	Yes	In-app reminder timing
Status	Yes	Upcoming, Due, Overdue, Paid, Paused, Cancelled, Expired
Linked actual transaction	No	Set after match
Documents	No	Bill, policy or agreement

10.5 Insurance Fields

Field	Required	Notes
Insurance type	Yes	Owner-managed master
Policy name	Yes	Friendly label
Provider	Yes	Insurer
Policy number	Yes	Unique reference
Insured person or asset	Yes	Person, bike, car, property or business
Premium amount	No	Expected premium
Payment frequency	Yes	Monthly/quarterly/annual/custom
Renewal date	Yes	Next due date
Nominee	No	Reference
Agent details	No	Name/contact reference
Linked account	No	Expected payment account
Policy status	Yes	Active, Expired, Inactive, Cancelled
Documents	No	Private uploads

10.6 Utility Fields

Field	Required	Notes
Utility type	Yes	Electricity, gas, water, internet, etc.
Location	Yes	Home, Office, Additional or custom
Connection name	Yes	Friendly identifier
Provider	No	Utility provider
Consumer/account number	No	Reference
Billing cycle	Yes	Frequency
Expected bill date	No	When bill normally arrives

Field	Required	Notes
Due date	Yes	Next due
Expected amount	No	Optional estimate
Linked account	No	Expected payment account
Status	Yes	Active, Paused, Closed
Bill documents	No	Private uploads

10.7 Subscription Fields

Field	Required	Notes
Subscription name	Yes	Amazon, Spotify or custom
Category	Yes	Entertainment, Business Software, Hosting, etc.
Provider	No	Merchant
Personal or office	Yes	Classification
Plan	No	Plan name
Amount	Yes	Expected recurring charge
Billing frequency	Yes	Monthly/annual/custom
Renewal date	Yes	Next charge or renewal
Auto-renew	Yes	Boolean
Linked account/card	No	Expected charge channel
Status	Yes	Active, Paused, Cancelled, Expired
Reference / notes	No	Account reference without storing sensitive passwords

10.8 Mutual Fund Fields

Field	Required	Notes
AMC / fund company	Yes	Fund house
Scheme name	Yes	Scheme
Category	Yes	Debt, Equity, Hybrid, ELSS or custom
Plan type	No	Direct/Regular; Growth/Dividend if required
Folio number	No	Reference
Agent/advisor	No	Owner-managed master
Investment mode	Yes	SIP or Lump Sum

Field	Required	Notes
SIP amount and frequency	Conditional	For SIP
Invested amount	Yes	Recorded principal
Units	No	Optional
Current value	No	Manual Phase 1 value
Valuation date	Conditional	Required when current value is entered
Start date	No	Reference
Goal or maturity date	No	Optional
Nominee and documents	No	Private

10.9 Share Fields

Field	Required	Notes
Company name	Yes	Primary grouping
Symbol	No	Ticker
Sector	No	Reporting dimension
Broker	No	Owner-managed master
Demat account	No	Linked reference
Quantity	Yes	Current recorded quantity
Average purchase price	No	Calculated or entered
Invested amount	Yes	Principal
Current value	No	Manual Phase 1 value
Valuation date	Conditional	Required with current value
Purchase history	No	Optional transaction-level detail
Notes and documents	No	Private

11. Reports and Insights

11.1 Required Report Groups

Group	Required views
Financial Overview	Income, Expenses, Net Cash Flow, Personal Spend, Office Spend, Balances, Pending Income, Pending Payments
Spend Intelligence	Category, Subcategory, Daily, Monthly, Highest Day, Highest Expense, Average Daily Spend, Personal vs Office

Group	Required views
Counterparty	Top Payees, Frequent Payees, Top Payers, Frequent Payers, Average payment value
Account	Inflow, Outflow, Calculated Balance, Statement Balance, Most-used account, Credit card utilisation, Reconciliation
Commitments	Upcoming 7/30/90 days, Overdue, Insurance, Utilities, Subscriptions, Credit card dues, EMIs
Investments	Allocation, Contributions, Mutual Funds by category/AMC/agent, Shares by company/sector, Maturities
Planning	Projected vs Actual, Variance, Home vs Office, Investment plan, Net cash-flow projection
Operations	Import history, Unknown items, Duplicate suspects, Deletion requests, Audit history

11.2 Common Report Behaviour

- Every total must support transaction drill-down where a transaction base exists.
- All financial reports must support date range, account, personal/office, category and subcategory filters where relevant.
- Reports must exclude soft-deleted and reversed records unless the user explicitly selects them.
- Internal transfers must be excluded from income and expense reports.
- Investment principal must be reported separately from normal consumption spending.
- Exports must respect the same filters and access controls as the UI.
- Report amounts must display the data freshness or last import/reconciliation context when relevant.

12. Non-Functional Requirements

Area	Requirement
Usability	Responsive web interface usable on desktop, tablet and mobile. Common entry and review actions should require minimal steps.
Performance	Dashboard and standard filtered lists should normally load within 3 seconds for expected initial data volume, excluding file-processing time.
Import scale	Initial design should support common monthly statements with at least several thousand rows per file.
Availability	Target production availability appropriate for a private business application, subject to selected hosting.
Data integrity	Financial writes should use database transactions where multiple linked records must update together.
Idempotency	Repeating the same import or confirmation request must not create duplicate financial records.
Accessibility	Use clear contrast, labelled inputs, keyboard-accessible forms and readable tables.

Area	Requirement
Browser support	Current major versions of Chrome, Edge and Safari. Mobile responsive browser support required.
Time and locale	Use Asia/Kolkata timezone and Indian date/number formats by default. Store timestamps consistently.
Currency	INR is the initial currency. Architecture should avoid blocking future multi-currency support.
Maintainability	Categories, mappings, permissions and master fields must be configurable without code changes.
Observability	Record application errors and import failures with sufficient context, excluding passwords and sensitive file content.
Visual theme	Use the approved palette with dominant navy #181E32. Supporting colours are #171D31, #CDC1B4, #6C6456, #767678, #56A688 and #3A71AA. Green is an accent or success colour, not the dominant application colour.
Calendar usability	The financial calendar must use a clear monthly grid, event-type legend, agenda panel, readable event chips, current-day state and responsive behaviour.
Identity consistency	All profile, header, sidebar and audit identity elements must use the currently authenticated user record.

12.1 Approved Visual Design Direction

The high-fidelity UI shall follow the approved palette below. The dark navy provides the dominant navigation and primary-action language. Teal is reserved for positive states and selected highlights. Blue supports information and interactive secondary states. Beige, earth and grey provide neutral structure.

Colour	HEX	Primary usage
	#181E32	Primary buttons, key headings, primary navigation language
	#171D31	Sidebar and high-contrast backgrounds
Warm Beige	#CDC1B4	Neutral accents, secondary visual structure
Earth Neutral	#6C6456	Insurance and muted category accents
Neutral Grey	#767678	Secondary text and inactive states
Teal	#56A688	Success, positive status and selected finance accents
Blue	#3A71AA	Information, links, active toggles and chart accents

13. Security, Privacy and Compliance Baseline

- All production traffic must use HTTPS.

- Passwords must be securely hashed using an industry-standard adaptive password hashing method. Passwords must never be stored or logged in plaintext.
- Password reset tokens must be random, single-use and time-limited.
- Role, tab, action and data permissions must be enforced server-side.
- Financial files and documents must be stored privately using authorised, expiring access URLs or equivalent controls.
- Banking login credentials, card CVV, UPI PIN and internet banking passwords must never be requested or stored.
- Only statement files uploaded by authorised users are in scope. Direct bank credential aggregation is excluded.
- Critical events must be audited, including login failures, password resets, permission changes, imports, edits and deletions.
- Database backups must be encrypted or protected by the selected hosting provider and access restricted.
- Production access must follow least privilege and separate application, database and storage credentials.
- Personal financial data should be retained only as required by the Owner and applicable contractual or legal obligations.
- The final privacy policy, terms and data retention wording should be reviewed for applicable Indian privacy and cybersecurity obligations before production launch.

Compliance scope: This is a private financial tracking application, not a regulated banking service. The app must follow strong privacy and security practices, but it must not claim to provide banking, investment, tax or accounting advice.

14. Data Migration and Excel Coverage

14.1 Workbook Sheet Mapping

Existing sheet	Application destination	Migration treatment
Cash Flow Summary	Dashboard and financial overview	Recalculate from imported/migrated data
Cash Flow Actual Vs Projection	Plans and Projections	Migrate planning heads; rebuild variance logic
Income	Income Plan and income categories	Migrate category structure and non-zero plan values
Actual Home Expenses	Home expense plan and categories	Migrate category/subcategory structure and non-zero values
Plan Office Expenses	Office expense plan and categories	Migrate category/subcategory structure and non-zero values
Investments	Investment plan and Investment masters	Migrate heads and non-zero values
Daily Expenses	Transactions - Expenses	Migrate valid row-level entries
List of Heads	Master Settings	Migrate category, income source, payment mode and month master data
Monthly Cash Flow Summary	Monthly Cash Flow report	Recalculate
Daily Cash Flow	Daily Cash Flow report	Recalculate
Daily Income Tracker	Transactions - Income	Migrate valid row-level entries
Monthly Expenses summary	Monthly Expense report	Recalculate
Monthly Income Summary	Monthly Income report	Recalculate

14.2 Migration Rules

- Migrate source transaction records and master values, not broken spreadsheet formulas.
- Validate dates, amounts, categories and payment modes before import.
- Convert Excel monthly plan columns into month-based plan records.
- Create an opening balance for each account where sufficient information is available.
- Flag rows with missing amount, date or category for migration review.
- Preserve the original workbook as a read-only migration reference.
- Provide a migration reconciliation summary comparing source totals and migrated totals.
- Do not migrate dummy or illustrative rows without client confirmation.

15. Release Acceptance Criteria

ID	Acceptance criterion
AC-01	Owner and Accountant can log in, change their own password and recover forgotten passwords by email.
AC-02	Owner can securely reset or replace Accountant password without viewing the existing password.
AC-03	Accountant sees only Accounts, Import Statements and Add Entry by default.
AC-04	Owner can enable or disable additional Accountant tabs and selected accounts.
AC-05	A supported statement can be imported, previewed, categorised and confirmed.
AC-06	Re-importing the same file does not create duplicate confirmed transactions.
AC-07	Known merchants are automatically categorised and unknown rows enter review.
AC-08	Internal transfers and credit card repayments do not inflate income or expense totals.
AC-09	Insurance, utility or subscription payments can match imported rows without duplicate expenses.
AC-10	Owner can create, edit, archive and manage categories and subcategories.
AC-11	Insurance, Utilities and Subscriptions operate as separate tabs with custom records.
AC-12	Investments contains Mutual Funds and Shares and remains hidden from Accountant.
AC-13	Plans and Projections show actual-versus-projected values calculated from transactions.
AC-14	Dashboard and report totals drill down to supporting records.
AC-15	Account reconciliation displays imported closing balance, calculated balance and difference.

ID	Acceptance criterion
AC-16	Accountant deletion requests require Owner approval and retain audit history.
AC-17	All 13 Excel sheets are represented through migrated data, configured masters or recalculated reports.
AC-18	Exports and API responses respect permissions.
AC-19	Private documents are inaccessible without authorised access.
AC-20	Client completes UAT and signs off the Phase 1 scope.
AC-21	Owner and Accountant profiles display only the currently authenticated user details in the sidebar, header and Profile page.
AC-22	Owner can create, invite, suspend, reactivate and configure more than one Accountant user from Users & Access.
AC-23	Permissions and selected accounts are stored per Accountant user and are enforced in the UI, direct URLs, exports and APIs.
AC-24	Financial Calendar provides readable month and agenda views with event types, filters, summaries and linked records.
AC-25	High-fidelity UI uses dominant navy #181E32 and the approved supporting colour palette.

16. Assumptions, Dependencies and Risks

16.1 Assumptions

- Initial currency is INR and timezone is Asia/Kolkata.
- There are two roles: Owner and Accountant. Initial deployment may start with one Accountant user, but the approved architecture supports multiple Accountant users with individual permissions and account access.
- The client will provide sample statements from each account/card format for import mapping.
- Current investment values are entered manually in Phase 1.
- In-app reminders are sufficient for financial commitments in Phase 1.
- Email delivery is required only for account invitation and password recovery in Phase 1.
- The Owner approves the initial category/subcategory hierarchy before migration.

16.2 Dependencies

- Production domain, hosting, database and private file storage.
- Email service and verified sending domain for password recovery.
- Sample bank, credit card and UPI statements.
- Client decisions on accounts, opening balances and historical migration period.
- Approved wireframes and UI design after this PRD.
- User Acceptance Testing by the Owner and Accountant.

16.3 Key Risks and Mitigations

Risk	Impact	Mitigation
Different bank statement formats	Import errors or extra manual mapping	Use configurable mappings, format profiles and sample-file testing.
Merchant narrations vary	Lower categorisation accuracy	Use normalisation, history, keywords and review feedback.
Manual and imported duplicates	Incorrect reports	Use provisional records, idempotent imports and matching workflow.
Over-complex first release	Delay and poor usability	Keep ERP/accounting features out of scope and use phased delivery.
Sensitive data exposure	High privacy impact	Strict permissions, private storage, audit and secure authentication.
Incorrect opening balances	Misleading account totals	Reconcile starting values and document migration cut-off.
Broken Excel formulas	Incorrect migration	Migrate raw records and rebuild calculations from agreed rules.

17. Future Roadmap - Not Included in Phase 1

- WhatsApp, email and mobile push financial reminders
- OCR extraction from bills and receipts
- Direct bank feeds or open-banking integrations where legally and technically suitable
- Live mutual-fund and share valuation feeds
- Advanced anomaly detection and forecasting
- Multi-owner or family profiles
- Multiple organisations / SaaS tenancy
- Native mobile applications
- Accountant category-management permissions
- Rule approval workflow and bulk automation controls
- Optional integrations with accounting platforms

18. Sign-off Checklist

Area	Approved	Comments
Product purpose and scope		
Owner and Accountant roles		
Owner dashboard metrics		
Navigation and tab names		
Statement import workflow		
Categorisation and matching rules		
Accounts and reconciliation		
Insurance / Utilities / Subscriptions		

Area	Approved	Comments
Investments / Mutual Funds / Shares		
Plans and Projections		
Reports and Insights		
Authentication and password reset		
Accountant permission defaults		
Excel migration mapping		
Out-of-scope items		
Users & Access and multiple user creation	Approved	Included in PRD v1.1 and UI prototype v1.1
Financial Calendar experience	Approved	Included in PRD v1.1 and UI prototype v1.1
Approved UI colour palette	Approved	Included in PRD v1.1 and UI prototype v1.1
Role-specific profile identity	Approved	Included in PRD v1.1 and UI prototype v1.1

Approval	Name	Signature / confirmation	Date
Client / Owner			
Product / Agency			
Development Lead			

Appendix A. Initial Master Categories from Excel

These items are the initial category and subcategory baseline. The Owner can add, edit, merge or archive them after setup.

Category group	Initial subcategories
Income - Salary and Personal	Monthly Salary / Take-home Pay; Bonus / Incentive Pay; Freelance / Consulting Income; Rental Income; Dividend / Interest Income; Other Personal Income
Income - Business	Interior Contracting Projects Revenue; BSH Home Appliances Sales; KitchenAid Service Revenue; Furniture and Chair Sales; Modular Workstation Sales; Sauna and Steam Room Revenue; Project Advances / Deposits; Other Business Income
Home - Housing	Rent / Home Loan EMI; Maintenance / Society Charges; Property Tax; Home Insurance Premium
Home - Utilities	Electricity; Water; Gas / LPG; Internet and Cable; Mobile Phone Bills
Home - Groceries and Food	Groceries and Vegetables; Dining Out / Restaurant; Food Delivery
Home - Transport	Fuel / Petrol; Car EMI / Insurance; Vehicle Maintenance and Service; Cab / Ola / Uber
Home - Health and Personal Care	Medical / Doctor Visits; Medicines and Pharmacy; Health Insurance Premium; Gym / Fitness; Salon / Grooming / Personal Care

Category group	Initial subcategories
Home - Education and Children	School / Tuition Fees; Books / Stationery; Online Courses / Subscriptions
Home - Lifestyle and Entertainment	OTT Subscriptions; Shopping; Electronics / Gadgets; Travel / Holidays; Gifts and Celebrations; Domestic Help / Maid Salary
Home - Loans and Miscellaneous	Personal Loan EMI; Credit Card Payments; Charitable Donations; Miscellaneous / Unexpected Expenses
Office - Overheads	Office Rent / Lease; Electricity and Utilities; Internet and Phone; Maintenance and Housekeeping; Office Supplies and Stationery
Office - Staff and Payroll	Staff Salaries; Contract Labour / Site Workers; PF / ESI / Statutory Compliance; Freelancer / Consultant Fees
Office - Purchase / Inventory	BSH Appliances; KitchenAid Products; Furniture / Chairs Raw Material; Modular Workstation Components; Gym Equipment; Sauna Materials / Units; Interior Contracting Materials
Office - Project and Site	Site Labour / Contractor Payments; Transportation / Logistics; Tools and Equipment; Installation and Commissioning; After-Sales Service / Warranty
Office - Sales, Marketing and Admin	Marketing and Advertising; Website / Digital / SEO; Business Travel; Client Hospitality; CA / Legal; GST / Tax Payments; Software / SaaS; Bank Charges / OD Interest
Investments - Market	Mutual Funds SIP; Stocks / Equity; NPS; ELSS / Tax-Saving Funds
Investments - Fixed Income	Fixed Deposit / RD; PPF; Savings Top-up; Bonds / Debentures
Investments - Real Estate and Business	Real Estate EMI / Down Payment; Business Capital / Working Capital; Equipment / Asset Purchase
Investments - Insurance and Protection	Life Insurance Premium; Term Plan Premium; ULIP / Endowment Plan

Appendix B. Existing Daily Entry Fields

Source sheet	Existing fields	Application coverage
Daily Expenses	Date, Category, Particulars, Amount, Payment Mode, Paid To, Remarks	Transaction date, Category/Subcategory, Narration/Reason, Amount, Account/Payment Channel, Payee, Reference/Remarks
Daily Income Tracker	Date, Income Category, Particulars/Source, Amount, Received Mode, Received From, Remarks	Transaction date, Category/Subcategory, Narration/Reason, Amount, Account/Payment Channel, Payer, Reference/Remarks
List of Heads	Home Expense Categories, Income Categories, Payment Modes, Month Start Dates	Owner master data and planning periods
